

Custom Flush Doors

Our flush modern doors offer a sturdy, functional option for certain applications and aesthetic needs. Every one of our flush doors is engineered to resist warping and twisting. You can select from a wide variety of wood species or paint grade MDF to finish out your flush door. Depending on the size, most of our flush doors can be quite heavy. To reduce the weight, you can choose to add a tubular core, which reduces the weight but maintains the structural stability. For extremely large doors, inquire about our aluminum honeycomb construction.
